(54) Title: DATA MODEL DEVELOPMENT TOOL

(57) Abstract: A tool for creating a multi-dimensional data structure in order to integrate data from disparate data sources. The tool facilitates the mapping of a new multi-dimensional data structure to one or more disparate data sources and allows the documentation of gaps and methods for bridging those gaps that may be implemented at the disparate data source sites. The tool may also facilitate the creation of mapping files for historical data conversation. The tool may be used in many types of environments across multiple industries including financial and insurance industries.
